# Introduction

Graphene, the single layer carbon based material, is transparent, flexible, and has excellent electronic properties. As it is called “the dream material,” graphene holds innumerable application potential. It is a material that still requires consistent research and at the same time it is a material that may hold the key to future electronics revolution with unlimited industrial value.

The 2nd Edition European Graphene Forum – EGF 2016 will be organized in Paris, France between the 1st and 3rd June, 2016. This event will cover the latest technology developments, applications, commercialization progress, end user requirements and challenges for Graphene and 2D Materials.
